1. The following is an examiner's statement of reasons for allowance: The present application relates to generally to the field of digital image processing, and in particular to the automatic correlation of images with objects in the images or events associated with the images. The various prior art of record fail to anticipate or render obviousness a method for correlating tracking data, associated with an activity occurring in a three-dimensional space, with images captured within the space, wherein remotely-accessible identification tags attached to people and/or objects associated with the activity are linked to one or more databases that uniquely identify characteristics of the people and/or objects, said method comprising the steps of: (a) locating a camera with respect to the three-dimensional space, wherein the camera at a given location has a determinable orientation and field of view that encompasses at least a portion of the space; (b) capturing a plurality of images with the camera and storing data corresponding to the images, including a capture time for each image; (c) capturing tracking data from the identification tags attached to the people and/or objects within the space and storing the tracking data, including a tag capture time for each time that a tag is remotely accessed; (d) correlating each image and the tracking data by interrelating tracking data having a tag capture time in substantial correspondence with the capture time of each image, thereby generating track data corresponding to each image; (e) utilizing the track data to determine positions of the people and/or objects within the three dimensional space at the capture time of each image; and (f) utilizing the location and orientation of the camera to determine the portion of the space captured in each

image and thereby reduce the track data to a track data subset corresponding to people and/or objects positioned within the portion of space captured in each image as specified in claims 1 and 17.
